Improving the Quality of Life and Strengthening the Resilience of Small Towns through Sustainable Sanitation

People. Innovating. Sanitation.

Who we are:

The Bremen Overseas Research & Development Association (BORDA) is a technical expert organisation in the field of sustainable environmental protection through integrated sanitation solutions.

BORDA's activities aim to make urban spaces more liveable by developing and implementing innovative decentralised sanitation solutions that increase climate resilience, strengthen social structures and promote the sustainable and careful use of natural resources locally.

What we do:

- ▶ Develop **innovative** decentralised sanitation solutions that **strengthen climate resilience**, and **social structures**
- ▶ Support integrated approaches to **policy formulation**, participatory **urban planning** processes and **infrastructure development**
- ▶ Promote and facilitate **capacity development** to civil society organisations, communities, government agencies, the private sector, scientific institutions, and international organisations
- ▶ Develop tailor-made solutions to realize **water and sanitation for all**

We design decentralised sanitation solutions in an integrated urban planning approach

The Project Outline (2023-2025)

Sam Neua, Lao PDR (BORDA, 2022)

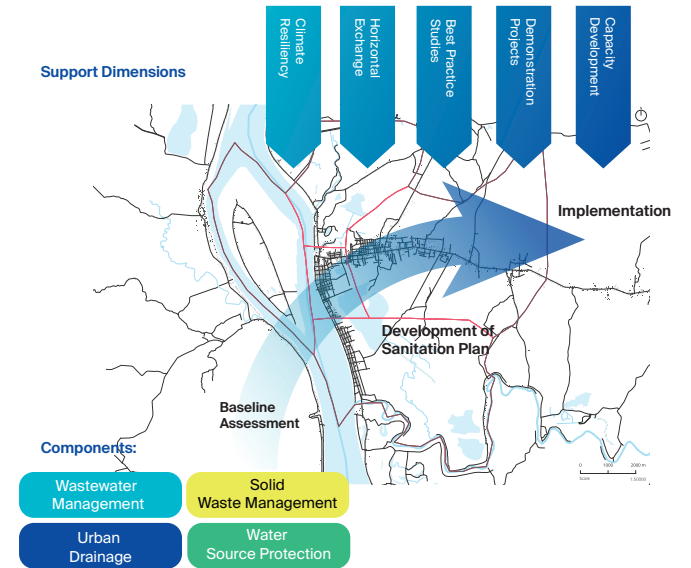

Urban neighborhoods are facing tremendous challenges due to an increasing vulnerability to water-related issues and climate change.

The project develops locally adapted development plans through an *inclusive participatory approach and prepares detailed sector strategies.*

Practical implementation is being emphasized through demonstration projects. Institutional and municipal staff capacities of the target communities are strengthened.

Project Goal

To kickstart the transformation of the target cities into models for water-sensitive and climate-resilient urban development.

Project Locations

BORDA is active in Southeast Asia since more than 15 years and currently operates out of *country offices in Lao PDR and Cambodia.* With a team of around 30 national staff members and 2 expatriate staffs, the BORDA project activities are implemented in *6 target cities.*
